LEARNING AT HOME

Coloring with the Conservancy

It's always a good time to learn about the unique species that call Catalina Island home. From blooming flowers to soaring eagles, this coloring book will teach you about local wildlife and give you an opportunity to showcase your creative coloring skills! You may choose to color each animal realistically, or create a unique coloring pattern all your own.

Let's get creative!

Catalina Wildlife

If you choose to color realistically, these photos may be helpful!

Catalina Island Fox

Bald Eagle

Catalina Orangetip Butterfly

Catalina Island Quail

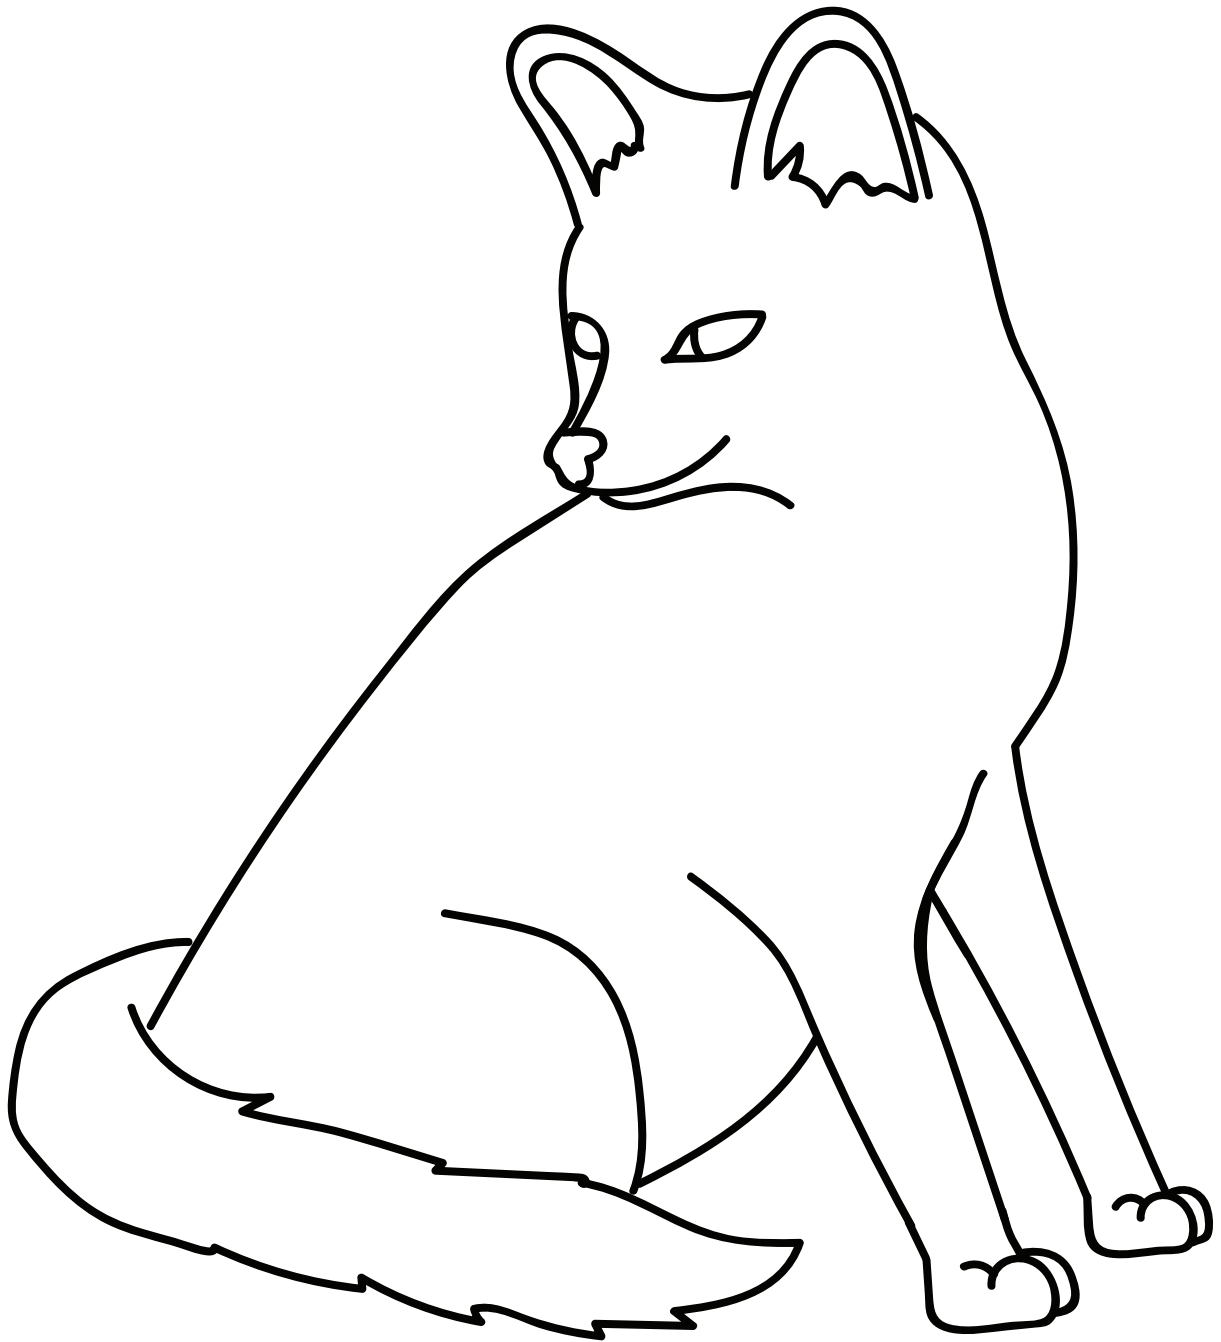

Malva Rosa

American Bison

Catalina Island Fox

The Catalina Island fox is found only here on Catalina. These small foxes are omnivores with a diet that includes berries, insects, and mice. Help keep our foxes healthy and happy by not feeding them human food. A natural diet is best.

Bald Eagle

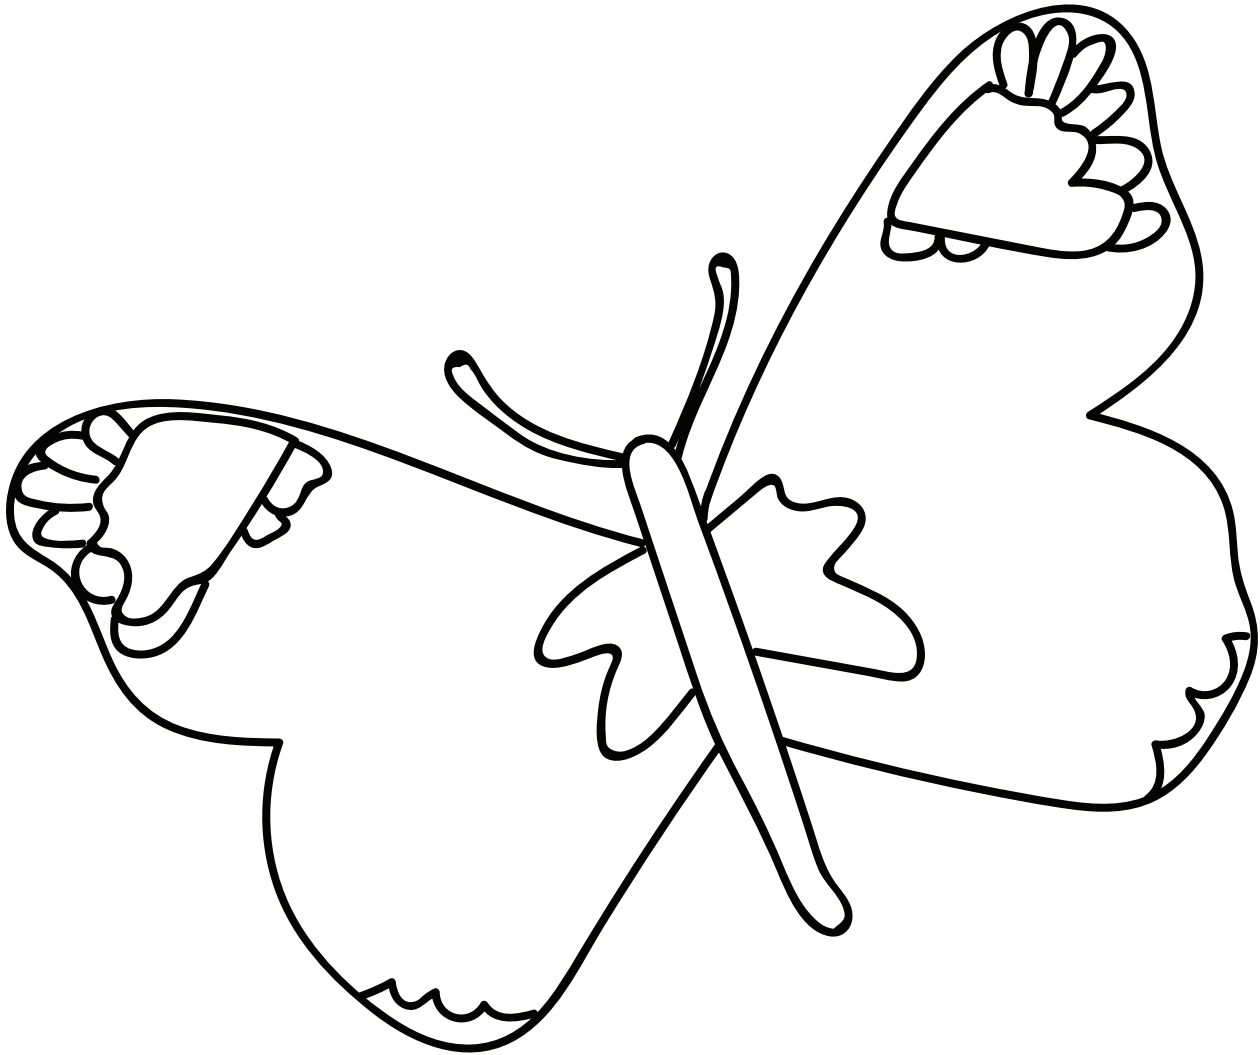

The Catalina Island Conservancy partnered with the Institute for Wildlife Studies (IWS) to bring bald eagles back to Catalina Island after their populations were affected by the pesticide DDT. Because of this work, today you may see an eagle soaring overhead or hunting with its sharp beak and talons.

Another way to spot eagles is to visit www.iws.org/livecams.html and watch live video of bald eagle nests on Catalina Island.

Catalina Orangetip Butterfly

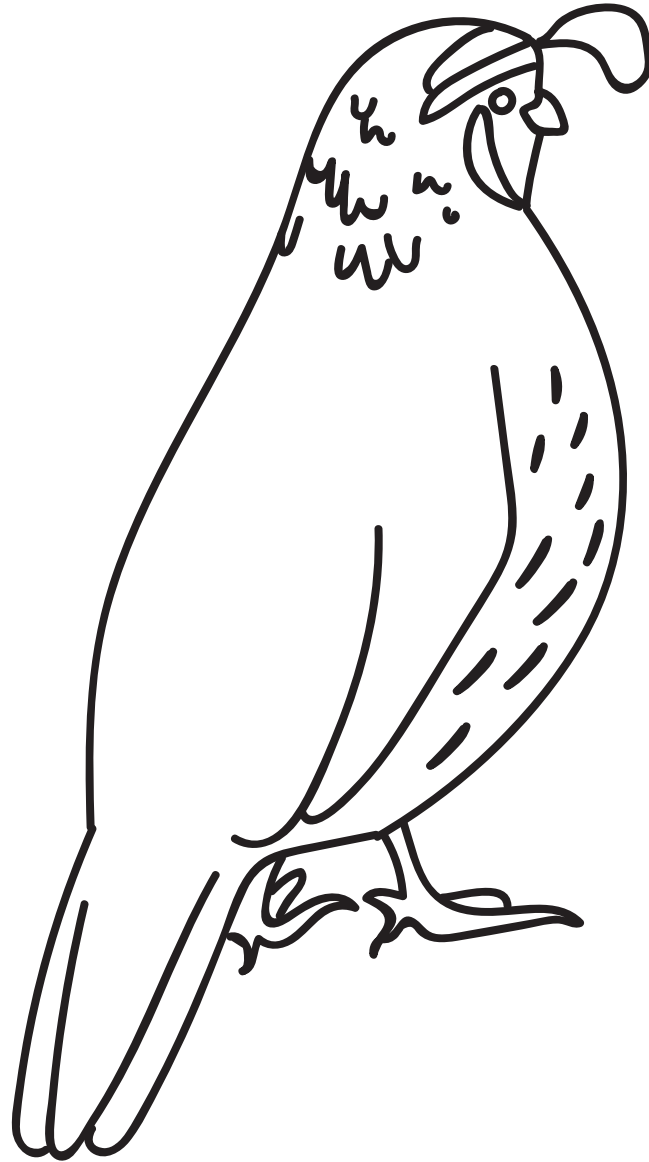

This beautiful butterfly is only found on Catalina Island. Look for their white wings with bright orange tips near the rocky slopes and ridge tops they call home.

CATALINA ISLAND

Catalina Island Quail

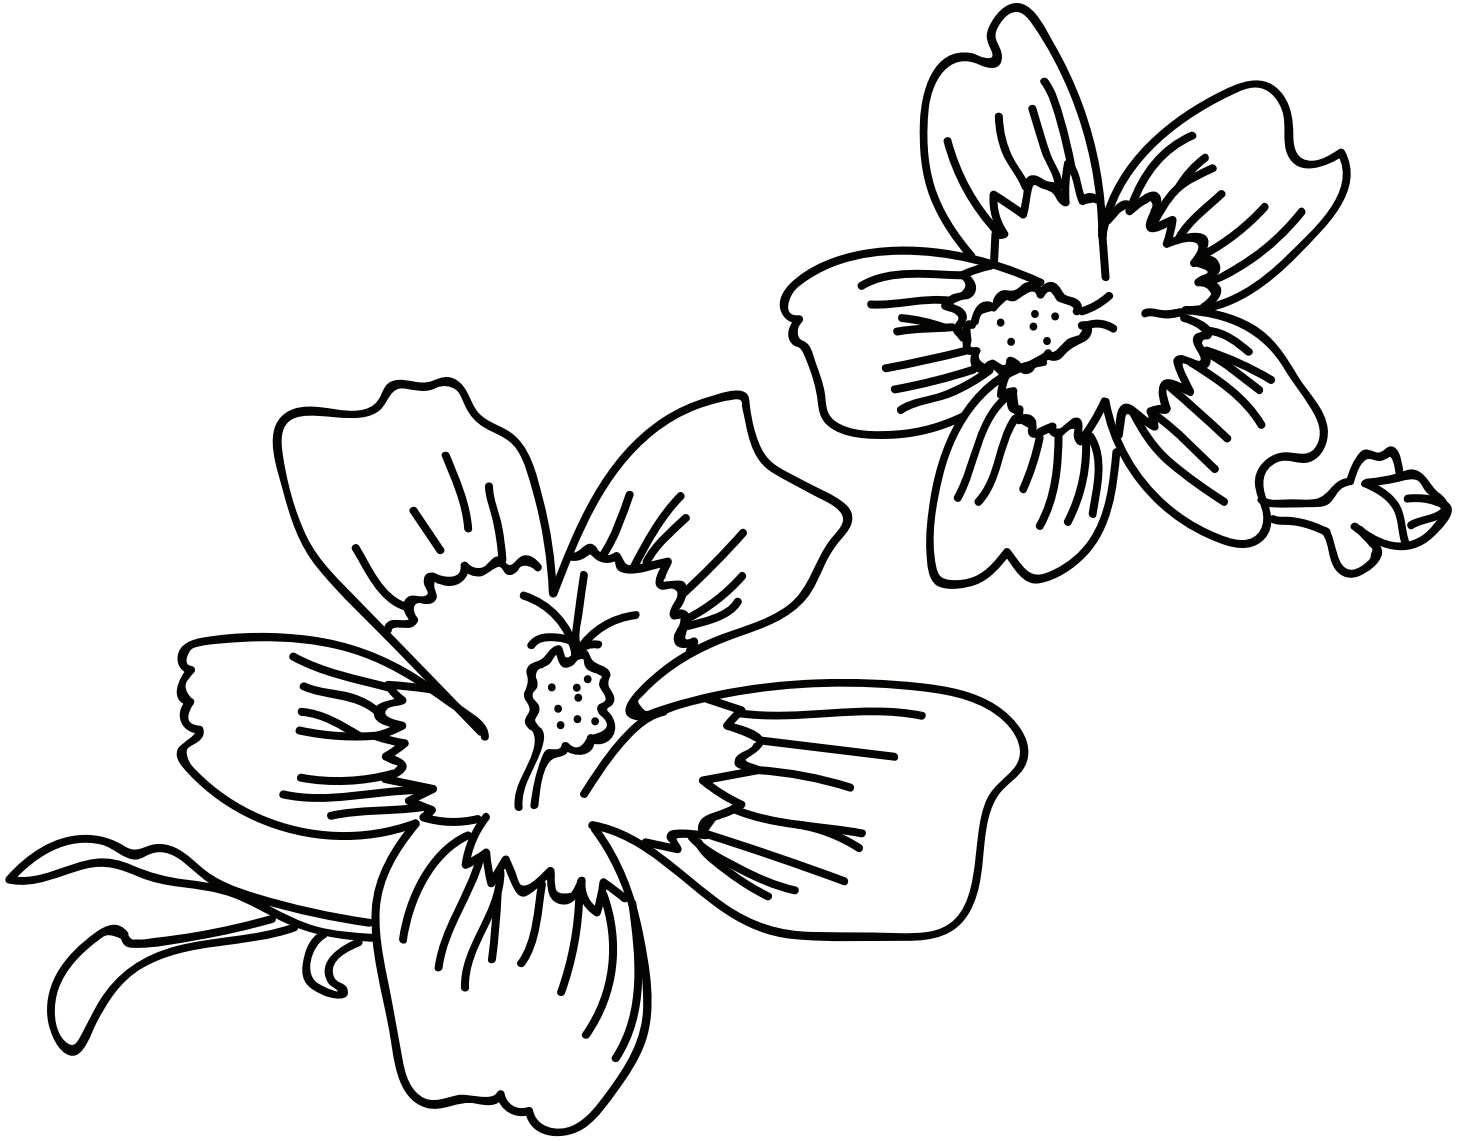

The Catalina Island quail is native to the island and is larger than its mainland relative the California quail. Quail are social and can often be seen in groups called "coveys". These coveys can have hundreds of individual quail.

CATALINA ISLAND

Malva Rosa

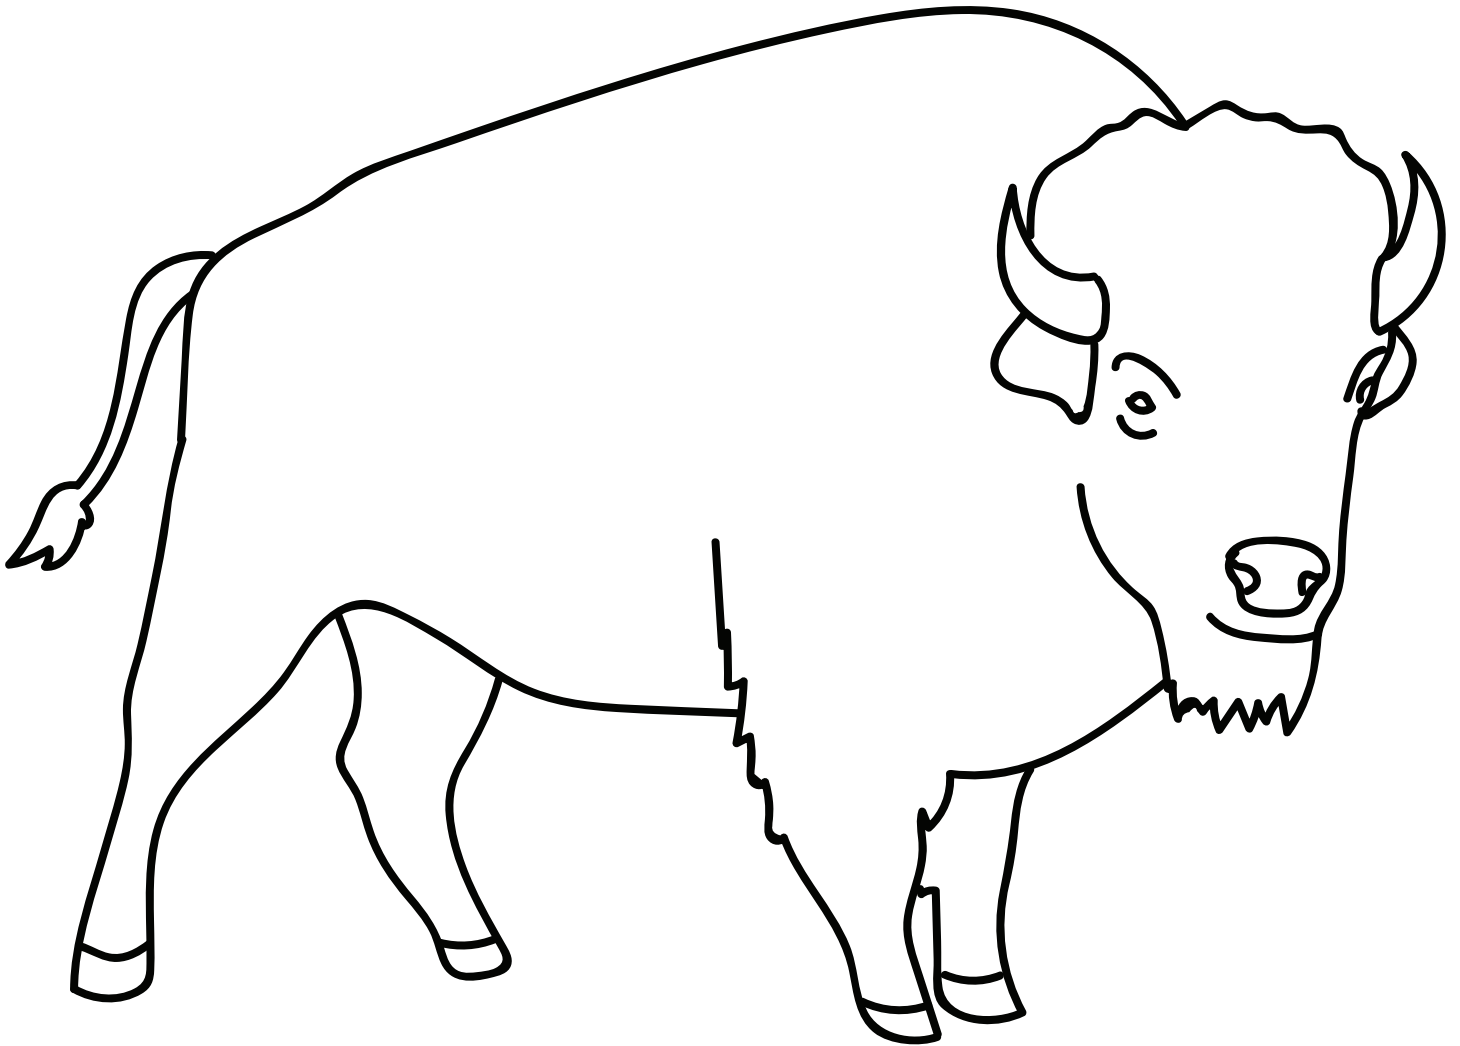

This plant has a pink and white flower that is both beautiful and a tasty treat for plant-eating animals. It can be found on Bird Rock at Two Harbors, and other spots where hungry herbivores cannot reach.

American Bison

Bison have been residents of Catalina Island since 1924 when they were brought from the mainland to be in the background for a western film.

Did you know bison can run as fast as 35 miles per hour?
That's faster than the speed limit for cars on Catalina Island!
