Advertising Specs & PRODUCTION REQUIREMENTS

HELPFUL TERMS

← **Bleed** is a printing term that refers to printing that goes beyond the edge of the sheet after trimming. It is very difficult to print exactly to the edge of a sheet of paper; to achieve this it is necessary to print a slightly larger area than is needed and then trim the paper down to the required finished size. Images, background images and fills which are intended to extend to the edge of the page must be extended beyond the trim line to give a bleed.

← The **live area** is a safe zone for important text or images. This is an area of your printed piece that is safe from cropping. Keep text and important graphics inside the live area.

← The final size of a printed page after excess edges have been cut off is the **trim size**.
