There are two public entrances to the expanded facility. The existing re-imaged Webster Street entrance maintains the current easy pedestrian access from downtown and incorporates a Café and Bookshop to permit a synergy of uses. The new Ewing Street wrap-around entrance integrates the connection to the new below-grade parking and includes a major glass component that affords attractive views to neighborhood churches and the historic district.

The east and west entrances are interconnected by a linear lobby-atrium, which provides clear visual orientation and access to all library departmental facilities and seamlessly integrates the existing renovated spaces and the new construction. The curved roof of the lobby-atrium contains a large north-facing skylight and a shaded south-facing clerestory window, bringing daylight into the center of the enlarged building.

An initial concept design phase, which included workshop interactions with major public and private Fort Wayne entities, identified the basic urban and architectural design strategies that met the goals of the library and the community.

The selected design gives the library, which has one of the largest genealogy collections in the nation, an image that reflects its prominent role in the community and enhances the urban context. It will make a significant portion of the collection "browse-able" by expanding open stacks.

This two-story, 190,000 square foot addition to and renovation of the existing 230,000 square foot Allen County Public Library in Fort Wayne, Indiana creates a monumental civic building that integrates the best aspects of the existing library and acts as a revitalizing influence in the downtown area.

Community use facilities are organized along the southern side of the first floor, between the lobby-atrium and Washington Blvd. These spaces include flexible Meeting Rooms, Access Fort Wayne Television, Community Computing and Public Computer Training, an Exhibition Gallery, the Café, and the Library Friend’s Store. The service and staff entrances are also off of Washington Boulevard.

The new Auditorium is located in a lower level and is accessed from this main lobby-atrium.

The lobby-atrium can be separated from the library spaces, so that community functions can extend past library hours if needed, without compromising library security.

The central lobby atrium also houses the Circulation Desk, Central Reference Desk, self-check stations, electronic catalog stations, and informational components, as well as stairs and elevators to the Library’s second level, the Auditorium, and the Garage below grade.
