Mr. Virgili,

In response to your comments (below).

The east bound "flight path" for aircraft departing PBIA is to fly 4 nautical miles east prior to turning. However the FAA Control Tower may provide alternate headings in the event of weather or when moving large amounts of traffic.

SUBMITTED:12/27/2016

The plane noise is getting ridiculous. How does it make sense to have these massive jets fly over a highly residential area every 5 minutes. Isn't there a flight path that takes these planes over a commercial area or over the everglades or agricultural area??

First thing in the morning, multiple jets flying eastward at low altitude from take-off.

PLEASE STOP SENDING PLANES EASTWARD AT TAKEOFF!!!

We apologize for the delayed response to your comment as we have made technical changes to the website.

Thank you for your comments.

Casandra R. Davis
