Essay Transcription: "Trees are Treasures"

Ah, aren't trees beautiful! I am going to tell you how important trees are and why we need them to survive on this planet. We rely on trees for our life!

To begin, we need more trees because trees make fresh air. Have you ever wondered why the air seems freshest around trees? That's because trees are natural refreshers. Some trees die because of humans cutting trees down.

Furthermore, floods and water keep trees down. This year there was a lot of rain this year. First of all, you should know trees need water but not that much! Remember you should water a tree but just a small amount of water.

Last but not least, we need more trees to live. But trees can also help with anxiety or stress. And not only we need trees but everything around us needs trees to plants, animals, and people just by planting one tree you could change the world!

I hope you now know so much about trees as I do! I told you why people need trees, why we need more trees. Now what are you waiting for, go plant a tree!
