

PORT EVERGLADES TARIFF NO. 12

Item No. 485–Backloading Petroleum.

Issue No. 4

Effective Date: October 1, 2023

Backloading of petroleum, alternative fuels, fuel blending components (includes alcohol, bio-diesel, and bio-diesel feed stocks) as cargo by pipeline from terminal facilities located within Port Everglades will be permitted on a case-to-case basis as approved by the Harbormaster. Backloading operations will be given a lower priority for berthing than ships and barges calling to discharge petroleum products.

No Wharfage will be charged on products backloaded as cargo on which Wharfage has previously been paid on the inbound movement unless such products have been processed, manufactured, blended for quality purposes, or otherwise changed or sold, in which case charges will be made in accordance with Items No. 535, 1057, and 1066. All other tariff charges will apply.

No Wharfage will be charged on bunkers backloaded to barges for redelivery to vessels at Port Everglades.
